## DESCRIPTION OF THE CATALOGUE VERSION

Duty:	S1
Rated voltage:	380V, 400V, 690V ( $\Delta/Y$ )
Frequency:	50 Hz
Ambient temperature:	from -20°C to + 40°C
Mounting height:	up to 1000 m above sea level
Number of free shaft ends:	1
Insulation class:	F
Bearings:	according to page 12

Other specifications dependent on the frame size:

Frame size	Degree of protection	Position of the terminal box	Number of terminals	Number of cable outlets	Optional rotation of the terminal box	Glands	Temperature sensors in winding	Bearing lubrication system	Thermal protection of bearings
Sg 56	IP 55	top	6	1	180°	M 20	on request	no	no
Sg 63	IP 55	top	6	1	180°	M 20	on request	no	no

We are able to supply almost any motor made according to customer's specifications

## DESCRIPTION OF THE CUSTOMISED VERSION

Different supply voltage	
Frequency:	60 Hz
Degree of protection:	IP 56
Insulation class:	H
Number of free shaft ends:	2
Tropicalization	
Different bearings	
Different duty type	
Adaptation for supply from a frequency inverter	
Different versions per customer's specifications	

As part of our development program, we reserve the right to alter or amend any of the specifications without giving prior notice

## RATINGS - TOLERANCES

Permissible deviations of real values from catalogue values according to IEC 60034-1:

Power factor $\cos \varphi$	$\Delta \cos \varphi = -1/6 (1 - \cos \varphi_N)$
Efficiency $\eta$	$\Delta \eta = -15\%(100 - \eta_N)$ for $P_N \leq 50\text{kW}$ $\Delta \eta = -10\%(100 - \eta_N)$ for $P_N > 50\text{kW}$
Speed $n$	$\Delta n = \pm 20\%(n_s - n_N)$ for $P_N > 1\text{kW}$ $\Delta n = \pm 30\%(n_s - n_N)$ for $P_N \leq 1\text{kW}$
Locked rotor current $I_L/I_N$	$\Delta (I_L/I_N) = +20\% (I_L/I_N)$
Locked rotor torque $T_L/T_N$	$\min (T_L/T_N) = -15\% (T_L/T_N)$ $\max (T_L/T_N) = +25\% (T_L/T_N)$
Breakdown torque $T_b/T_N$	$\Delta (T_b/T_N) = -10\% (T_b/T_N)$
Moment of inertia $J$ [kgm <sup>2</sup> ]	$\Delta J = \pm 10\% J$
Sound pressure level $L_{pA}$ [dB]	$\Delta L_{pA} = +3 \text{ dB /A/}$

The efficiency of motors of frame size 56 - 180 is determined by method of total loss measurement, and the efficiency of motors of frame size 200 - 500 is determined by method of summary of losses.

The rated current of a motor is the value consumed by a given motor at the rated load, rated supply voltage, rated efficiency and power factor.

Real current consumed by the motor at the rated supply voltage and rated load results from the real efficiency and real power factor (permissible deviations).

No-load current in small motors and low speeds, e.g. frame size 90, 2p=6 or 2p=8, may be approximately slightly lower or equal to the rated current. In case of supply voltage higher than the rated one it may even exceed the rated current.

## STANDARDS AND EQUIVALENTS

The electric motors are manufactured according to international standards:

		Country	Standard
Rating and performance	IEC 60034-1	Germany	DIN VDE 0530; DIN EN 60034/VDE; DIN IEC 34; DIN 42673; DIN 42677
Methods for determining losses and efficiency	IEC 60034-2		
Classification of degrees of protection	IEC 60034-5	Great Britain	BS 5000; BS 4999
Methods of cooling	IEC 60034-6		
Symbols of construction and mounting arrangements	IEC 60034-7	France	NFC 51 111 51 120; NFC 51 200; NFC 51 115 NFC 51 117; NFC 51 119
Terminal markings and direction of rotation	IEC 60034-8		
Noise limits	IEC 60034-9	Italy	CEI 2-3 1988; CEI 2-6; CEI 2-7 CEI 2-8; CEI 2-15
Dimensions and output for electric machines	IEC 60072-1		CEI/UNEL 13113-71; CEI/UNEL 13117-71; CEI/UNEL 13118-71;
Vibration limits	IEC 60034-14		

The products comply with the specifications regarding the electromagnetic compatibility specified in:  
EN 50081-1, EN 50081-2, EN 50082-1, EN 50082-2.

All the motors are manufactured in Quality Assurance System consistent with ISO 9001.

ISO9001

The motors covered by the present catalogue comply with the regulations and standards effective in other countries, consistent with IEC standards.

IEC

All the motors described in the present catalogue are provided with CE mark. It means that our products are consistent with the European Union directives regarding the safety measures.

CE

**EFFICIENCY OF MOTORS**

Since 2001 Cantoni Motor has started offering high efficiency series SEE motors. The SEE motors belong to the EFF1 efficiency class (high efficiency) in accordance with the recommendations of the European Association of Electric Motor Manufacturers CEMEP acting under the auspices of the European Power Committee.

The present catalogue mostly describes the electric motors belonging to the second efficiency class EFF2 (improved efficiency).

These motors show high efficiency, exceeding average efficiency of motors manufactured by other European manufacturers.

Output [kW]	Average efficiency of SEE high efficiency motors from Cantoni Motor [%]	Average efficiency of Sg and Sh motors from Cantoni Motor [%]	Average efficiency of motors from other manufacturers [%]
0,75	83,9	75,0	73,7
1,1	83,8	76,7	75,9
1,5	85,0	79,0	78,0
2,2	86,4	82,0	80,1
3,0	87,4	82,7	81,5
4,0	88,3	85,1	83,7
5,5	89,2	85,9	85,0
7,5	90,1	87,0	86,4
11	91,0	89,0	87,0

## INSULATION CLASSIFICATION

The insulation system of an electric motor is determined by a given insulation class on the basis of its thermal resistance.  
This thermal resistance should be guaranteed by the entire set of electric insulating materials used in the motor insulating system.

Thermal resistance classification is related to the temperature of the hotspot in the insulation occurring during rated operating conditions of the electric motor, allowing for the highest permissible rise in average temperature.

This rise should be selected so that at the highest permissible ambient temperature, the temperature of the hotspot in insulation will not exceed the value assigned to a given thermal resistance class.

Symbols of thermal resistance classes (permissible insulation temperatures for ambient temperature of 40°C)

Symbol	Temperature [°C]
A	105
E	120
B	130
F	155
H	180

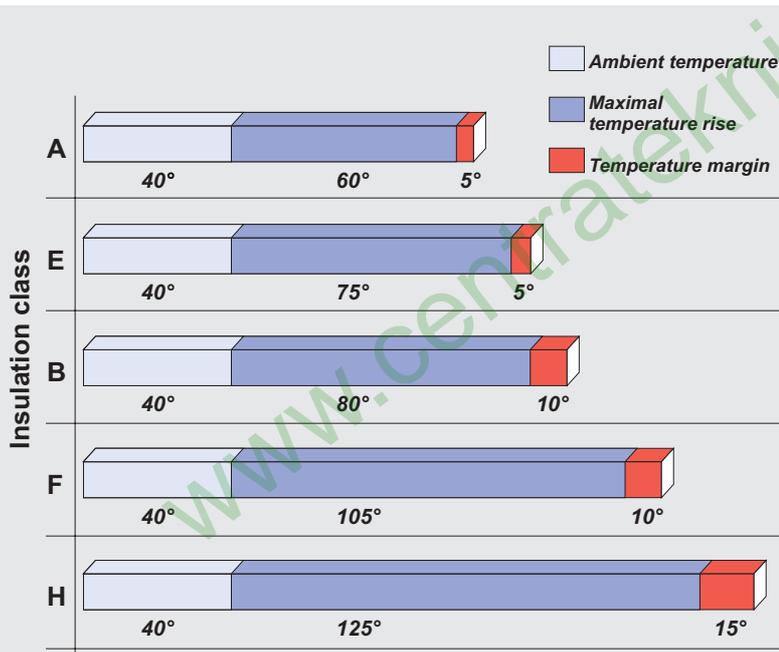

Insulation class F for an electric motor means that at ambient temperature of 40°C the temperature rise of its windings may be max. 105°C with the additional temperature margin of 10°C (under specified measuring conditions in accordance with the IEC 60034-1 standard).

## Class F

The motors made by Cantoni Motor in their basic version have the insulation class F while the temperature rise is for class B. It means longer life of motors.

On customer's demand, we make motors with insulation class H.

Strengthened insulation system makes it possible to supply our motors from frequency inverters.

## DEGREE OF PROTECTION IP

According to the IEC 60034-5 standard the electric motors are provided with IP code which determines the degree of protection ensured by the housing against access to dangerous parts, introducing foreign matter and/or water.

The IP code consists of IP code letters and two obligatory digits, meaning:

The first digit (protection from introduction Of solid foreign matter)		The second digit (protection against penetration of water and its harmful effects)	
IP	Definition	IP	Definition
0	no protection	0	no protection
1	diameter $\geq$ 50 mm	1	dropping vertically
2	diameter $\geq$ 12,5 mm	2	dropping (up to 15°)
3	diameter $\geq$ 2,5 mm	3	sprayed
4	diameter $\geq$ 1,0 mm	4	splashed
5	limited protection against dust	5	in stream
		6	in strong stream
		7	under short-time immersion
		8	under permanent immersion

The motors described in the present catalogue in their basic version have the IP 55 degree of protection.

On demand we make motors with the IP 56 degree of protection.

# IP55

## MOUNTING ARRANGEMENTS

MOUNTING ARRANGEMENTS

### MOTOR FEET

Motors of frame size  $\leq 112$  have screwed feet.  
Motors of frame size 132 have screwed feet or integrated with the motor housing.  
Motors of frame size  $\geq 160$  have feet integrated with the motor housing.

### TERMINAL BOX

Terminal boxes of low voltage motors have threaded inlet holes designed for mounting cable glands. The box contains terminal board with marked terminals making possible connection of supply cables.

In addition, terminal boxes may be provided with additional terminals connected to the ends of thermal protection or anticondensation heater circuits and extra glands to connect these circuits.

Low voltage high-power motors contain terminal boxes with cable gland seals and cable clamps to prevent their removal. Inside the boxes there are special clamps used to ground the supply cable armouring.

In low voltage motors of very high power three supply busbar are used.

Box covers of low voltage high-power motors are made in form of antiimplosion membranes.

The circuits of thermal protection and anticondensation heaters are connected to separate terminal boxes.

### VIBRATION LEVEL AND ACOUSTIC POWER

VN

The rotor balancing method guarantees maintaining a normal vibration level VN in accordance with the IEC 60034-14 standard and basic acoustic power level in accordance with the IEC 60034-9 standard. On customer's demand the motors may be made with reduced vibration or noise level.

**HOUSING, END SHIELDS, FEET**

Frame size [mm]	Motor housing	End shields	Feet
56	Aluminium	Aluminium	Aluminium - screwed
63	Aluminium	Aluminium	Aluminium - screwed
71	Aluminium	Aluminium	Aluminium - screwed
80	Aluminium	Aluminium	Aluminium - screwed
90	Aluminium	Cast iron	Aluminium - screwed

400	Cast iron	Cast iron	Cast iron - integrated
450	Cast iron	Cast iron	Cast iron - integrated
500	Cast iron	Cast iron	Cast iron - integrated

In motors of frame size 80: end shields may be made of cast iron.

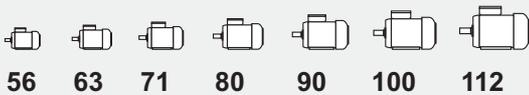

In motors of frame size 90 and 100: end shields may be made of aluminium.

In motors of frame size 132: feet may be integrated with housing.

Value of radial force  $F_R$  acting on the shaft end for a given belt pulley diameter is calculated according to the following formula:

$$F_R = \frac{19600 \times P \times k}{D_k \times n} \text{ [N]}$$

- where: P - motor output [kW]  
 D<sub>k</sub> - belt pulley diameter [m]  
 n - speed [rpm]  
 k - belt tension factor:  
 for V-belts k=2,2  
 for flat belts k=3

Value of force  $F_R$  acting on any point of the shaft end (between points X=max and X=0) may be calculated according to the following formula:

$$F_R = F_{X0} - \frac{X}{E} \times (F_{X0} - F_{XMAX}) \text{ [N]}$$

- where: F<sub>X0</sub> - value of  $F_R$  force acting on the beginning of the shaft end  
 F<sub>XMAX</sub> - value of  $F_R$  force acting on the end of the shaft end  
 E - length of the shaft end

## BEARINGS

*Bearings in standard version for horizontal duty.*

## COOLING SYSTEM

Standard motors of frame size 56 ÷ 500 are being cooled down by means of a fan installed on the shaft from the non-drive end, covered with steel cover, cooling system IC 411 according to the IEC 60034-6 standard.

The design of fans and fan covers as well as materials used ensure optimum utilization of their aerodynamic and aeroacoustic properties.

Standard motors can operate in both directions of rotation, with the exception of Sh 355, 400, 450, 500 (2 and 4 poles) motors where unidirectional fans are applied.

## ORDERING INFORMATION

Orders for motors should specify:

- motor type designation,
- rated output,
- rated speed,
- operating duty,
- supply voltage and connection,
- frequency,
- mounting arrangements,
- degree of protection,
- machine to be driven,
- other details of out-of-catalogue or special version,

and information concerning additional accessories e.g.

- thermal protection,
- anticondensation heaters,
- vibration sensors,
- etc.

When ordering high-power or special purpose motors one should also indicate:

- required direction of rotation,
- required degree of interior protection,
- method of start-up,
- method of coupling with the driven unit (gears, dimensions of belt pulleys, etc.),
- type of driven machine (nature of load), including the moment of inertia J or flywheel effect GD<sup>2</sup> brought to the motor shaft,
- other customer's specifications.

When ordering spare parts one should specify:

- full designation of the motor type including its serial number (provided on the nameplate) or catalogue number,
- degree of protection,
- mounting form,
- name of part,
- number of pieces.

<b>HIGH VOLTAGE INDUCTION MOTORS</b>	
Totally enclosed motors IP55	160 - 3150
Totally enclosed motors for power engineering IP55	200 - 2000
Open drip proof motors IP23	200 - 1250
<b>MOTORS WITH ENLARGED RATED OUTPUT</b>	<b>0,12 - 200</b>
<b>MOTORS WITH FOREIGN COOLING</b>	
Motors with foreign cooling IP54 (IP55)	0,09 - 1400
Motors with foreign cooling IP20	0,09 - 2,2
<b>3-PHASE INDUCTION MOTORS FOR PUMPS</b>	
Standard motors for pumps	0,37 - 90
Explosion-proof motors for pumps	11 - 45
Explosion-proof marine motors for pumps	10 - 50
<b>MOTORS TO BE BUILT-IN</b>	
1-phase motors to be built-in	0,06 - 1,5
3-phase motors to be built-in	0,09 - 160
<b>BRAKE MOTORS</b>	
Brake motors (with DC brake)	0,09 - 160
Brake motors (with AC brake)	3 - 11
<b>EXPLOSION-PROOF MOTORS</b>	
Increased safety motors	0,09 - 22
Flame-proof motors	11 - 250
Flame-proof marine motors	10 - 99
Special purpose flame-proof motors for mining	4,5 - 170
Special purpose flame-proof motors for chemical industry	5,5 - 45
Special purpose flame-proof marine motors	10 - 50
High voltage flame-proof motors	200 - 1400
<b>MOTORS FOR AXIAL-FLOW FANS</b>	
1-phase motors for axial-flow fans	0,18 - 0,75
3-phase motors for axial-flow fans	0,2 - 1,1
3-phase motors for axial-flow mining fans	11 - 55
3-phase explosion-proof motors for air duct axial-flow fans	7,5 - 90
3-phase marine motors for axial-flow fans	0,75 - 25,3
3-phase explosion-proof marine motors for axial-flow fans	10 - 18,5
3-phase multi-speed motors for axial-flow fans	0,18 - 0,75
3-phase multi-speed motors for air duct axial-flow fans	10 - 40

**PRODUCTION PROGRAM**

OUTPUT RANGE [kW]

**MULTI-SPEED MOTORS**

General purpose 2-speed motors	0,07 - 250
General purpose multi-speed motors	0,12 - 60

**MARINE MOTORS**

General purpose marine motors	0,06 - 350
Marine motors for pumps	22 - 99
Marine motors for axial-flow fans	5,5 - 25
Marine motors for boat davits	9 - 30
Marine motors for tubular rudders	200 - 2000
General purpose explosion-proof marine motors	3,5 - 99
Explosion-proof marine motors for pumps	10 - 50
Explosion-proof marine motors for axial-flow fans	10 - 18,5

**WOUND ROTOR INDUCTION MOTORS**

Totally enclosed (IP 54, 55) wound rotor induction motors	18,5 - 315
Open drip proof (IP 23) wound rotor induction motors	55 - 315

**CRANE MOTORS**

Squirrel cage crane motors	2,2 - 15
Wound rotor crane motors	0,8 - 185
Two-speed crane motors with brake	0,28 - 13

**SPECIAL PURPOSE INDUCTION MOTORS**

Motors with 0/Y/Δ switch	5,5 - 7,5
Motors with increased slip	3,0 - 22
Roller table motors for iron and steel industry	1,1 - 7,5
1-phase motors with shaft height 65 mm	0,75 - 2,0
3-phase motors with shaft height 65 mm	0,75 - 2,0

**HIGH EFFICIENCY SEE MOTORS**

0,55 - 315

**MOTORS ACCORDING TO NEMA AND CSA STANDARDS**

0,8 - 500 [HP]

**ACCESSORIES**

DC electromagnetic disc brakes	braking torque	4 - 800 [Nm]
AC electromagnetic disc brakes	braking torque	4 - 300 [Nm]
Powder brakes and clutches	torque	6 - 170 [Nm]
Thrustors	force of piston rod	500 - 3200 [N]
